

# Quick Guide to Online Maps and Mapping

## for Zoning Administrators and Town Staff

Unfortunately there is no single mapping program which does everything (although the ANR Natural Resources Atlas is close!), so here's a list of some useful info.

SWCRPC can make paper maps, online maps and spatial data to meet your specific purposes. Contact Katharine Otto, 802-674-9201, [kotto@swcrpc.org](mailto:kotto@swcrpc.org) for more information

### Useful Links

#### SWCRPC GIS Resources

- <http://swcrpc.org/gis-mapping/> - every so often add link to a new resource as it becomes available

#### Vermont GIS Resources

- ANR Natural Resources Atlas - <http://anrmaps.vermont.gov/websites/anra/>
  - Includes several "Layers" which are related data grouped together in a map
  - Helpful how-to video at [https://www.youtube.com/watch?v=iqDr93vUC\\_8](https://www.youtube.com/watch?v=iqDr93vUC_8)
  - "FloodReady Map" – known as "Floodplain Management" layer
- VT Center for Geographic Information - <http://vcgi.vermont.gov/>
  - The Center of all GIS activity in Vermont
  - Stores lots of data available from a variety of sources, including State Agencies. Data can be downloaded, or links can be made to the data in other online mapping applications
  - Has links to many webinars/ trainings
- Renewable Energy Atlas of Vermont - <http://www.vtenergyatlas.com/>
- VT BioFinder Mapping Tool - <http://biofinder.vermont.gov/biofindermap.htm>
  - Focuses on natural resources and their contribution to biodiversity
  - Allows for large scale suitability assessment – eg where to put development and have minimal impacts on the natural environment
- VT Forest Stewardship Atlas - <http://anrmaps.vermont.gov/websites/ForestStewardship/>
- VT Transparency Map Portal - <http://vtrans.maps.arcgis.com/home/>
  - Interactive maps include traffic volumes, Vermont 511 and bridges
- VT Trans Static Maps - <http://vtransmaps.vermont.gov/staticmaps.htm>
  - Including Town Highway Maps
- VT Online Bridge and Culvert Inventory Tool – <http://vtculverts.org>
  - Includes online map of all town maintained bridges and culverts in your town
- VT E911 Viewer - <http://maps.vermont.gov/e911/Html5Viewer/?viewer=e911viewer>
  - Shows all the information emergency services might need – including buildings, roads, dams, trails, hydrants, etc

#### Non-Vermont Mapping Resources that are useful for Vermont town purposes

- FEMA Firmette – <https://msc.fema.gov/portal/search>
  - Official copy of a FEMA FIRM (or part of one) that is needed for many FEMA related applications (eg home buy-outs, hazard mitigation grants)
  - For instructions on how to make a Firmette, visit <http://www.fema.gov/media-library/assets/documents/34930>
- Longitudinal Employer-Household Dynamics (LEHD) Origin-Destination Employment Statistics (LODES) - <http://onthemap.ces.census.gov/>
  - Online mapping tool which shows info about employment of people who live in your town, and who work in your town. Info comes from your Tax Form W-2 so includes about 90% of all people employed (does not include self-employed)
- Web Soil Survey - <http://websoilsurvey.sc.egov.usda.gov>
  - Information about soils from the USDA Natural Resources Conservation Service

## Other Free Mapping Resources (often do not have data pre-loaded)

- ArcGIS online - [www.arcgis.com](http://www.arcgis.com) – online GIS Software from ESRI
- Google Maps and Google Earth – <https://www.google.com/maps>  
<http://www.google.com/earth/index.html>
- DraftSight - <https://www.3ds.com/products-services/draftsight-cad-software/>
  - Allows you to open .dwg files that are created in AutoCAD (often by engineers and surveyors)
- QGIS – Quantum GIS – free desktop mapping software <http://www.qgis.org/en/site/> .
  - Helpful webinars about using it at <http://vcqi.vermont.gov/events/archive>
- Wide variety of mapping apps for your tablets/ smartphone
  - For examples see [http://vcqi.vermont.gov/sites/vcqi/files/event\\_archive/Webinar\\_Smartphones\\_Dec2013.pdf](http://vcqi.vermont.gov/sites/vcqi/files/event_archive/Webinar_Smartphones_Dec2013.pdf)

## Key Words

**ArcGIS/ ArcMap** – A type of mapping software created by ESRI. Widely used across the USA. Paper/ printed maps are often created using this software

**Base Maps** – the map shown behind all the data – aerial/ orthophoto, topographic, simple grey canvas (with roads)

**Current Extent** – What area the map is currently showing

**FIRM** – Flood Insurance Rate Map – produced by FEMA

**Filter** – In basic terms it is a “search”.

**GIS** – Geographic Information Systems – a general name often used for mapping things. There are some variations on the definition.

**kml/ kmz** – data file with spatial information primarily designed for the google mapping environments, but is also a rather universal file type that can be used in other places

**Layer** – Can mean two things – either a group of data in a map (eg ANR Natural Resources Atlas) or how data is viewed (usually referring to a GIS type .lyr).

**Legend** – Also known as the “Key” – ie the color/ symbols on the map explained

**Metadata** – Data about the data – ie information about what your data shows, who collected it, when it was last updated, and other things you might want to know

**Orthophoto** – commonly known as aerial photo

**Shapefile** – data file with spatial information primarily designed for the ESRI mapping environments, but can also be used in other places. When you see this file on the computer it will appear to be 4-8 files of the same name but with different endings such as .shx, .shp, .dbf, .prf. Some online systems allow you to either upload a zipped version of this file (eg ArcGIS online) or particular parts of this file (eg LODS).

**Toggle Toolbar** – Useful toolbar which appears at the top of the Atlas, including ability to print, identify data and measure

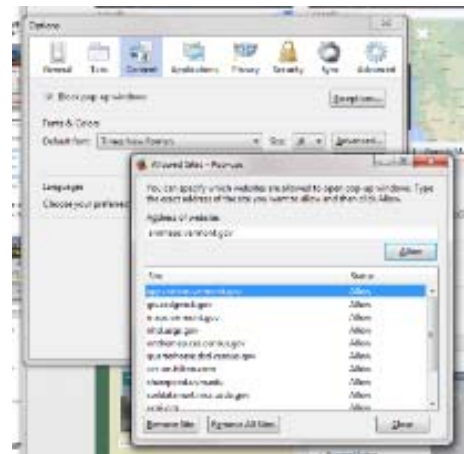

**Theme** – A group of data that are useful to see together

# Vermont Natural Resources Atlas

## Getting started

Make sure your pop up blocker is turned off

- In Firefox, go to Tools > Options > Content. Click on “Exceptions” next to “Block pop-up windows” and then type *anrmaps.vermont.gov* and click “Allow”. Click “Close”, and then “OK”.
- In Internet Explorer, go to Settings > Internet Options > Privacy. Click on “Settings” next of “Turn on Pop-up Blocker” and then type *anrmaps.vermont.gov* and click “Add”. Click “Close”, then “Apply” and then “OK”.

Other useful notes:

- Google Chrome – cannot be used at the moment – see note from ANR
- “Silverlight” is needed to run the program – so if prompted, allow Silverlight to run (may be as an add-on)

### Google Chrome Users, Please Note:

Mozilla/Netscape browsers will be discontinuing its support for Microsoft Silverlight. Since the Natural Resources Atlas currently uses the Silverlight plugin, the Natural Resources Atlas will stop working in Chrome browsers starting in April, 2015. You may be required to 'enable' the plugin to continue using the plugin in Chrome beyond April, 2015. However, **September 2015, Silverlight will no longer work in Chrome.** If you would like to continue using our Natural Resources Atlas using the tools and functionality found within the Silverlight platform, you will be required to do so in another browser such as Internet Explorer. In the meantime, the Agency of Natural Resources is working on a new viewer utilizing the HTML5 web programming language that will be a cross-browser language that will also work on mobile devices, and provide more compatibilities between PC/MAC users. It will be our goal to offer the same amount of functionality between the Silverlight viewer and the HTML5 viewer that we will be releasing early 2015.

Thank you for your support while we work through this transition.  
-ANR GIS

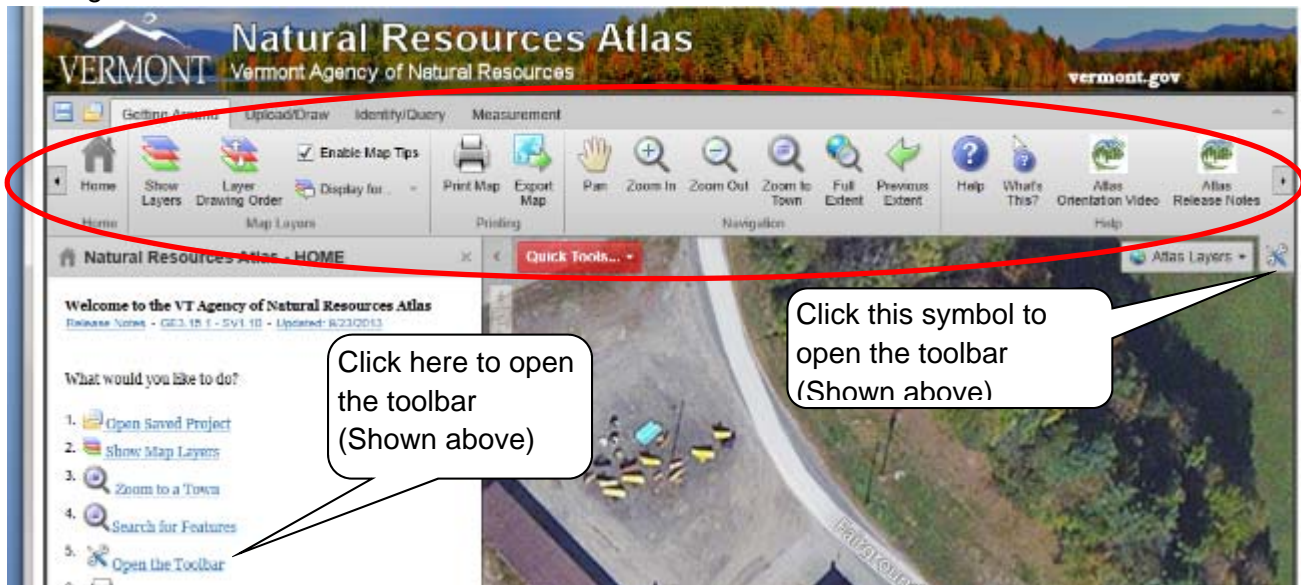

[Close Window and Return to the Atlas](#)

Go to <http://anrmaps.vermont.gov/websites/anra/>

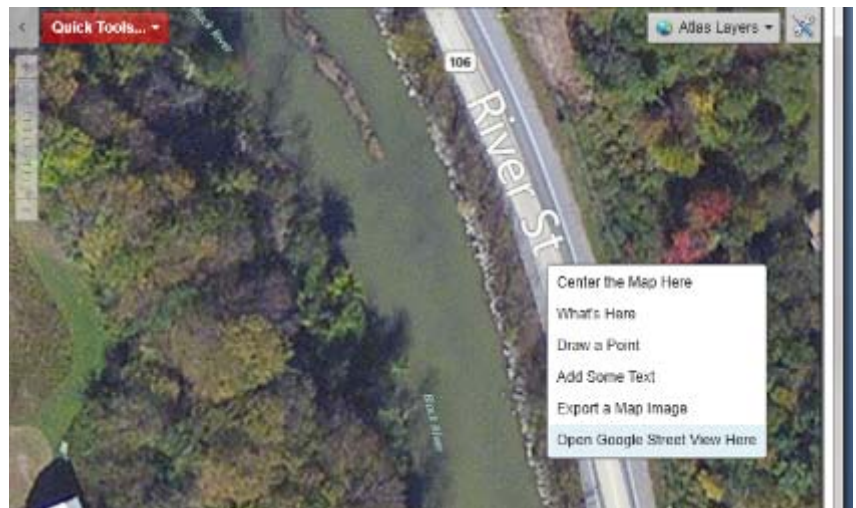

## Exploring the tool

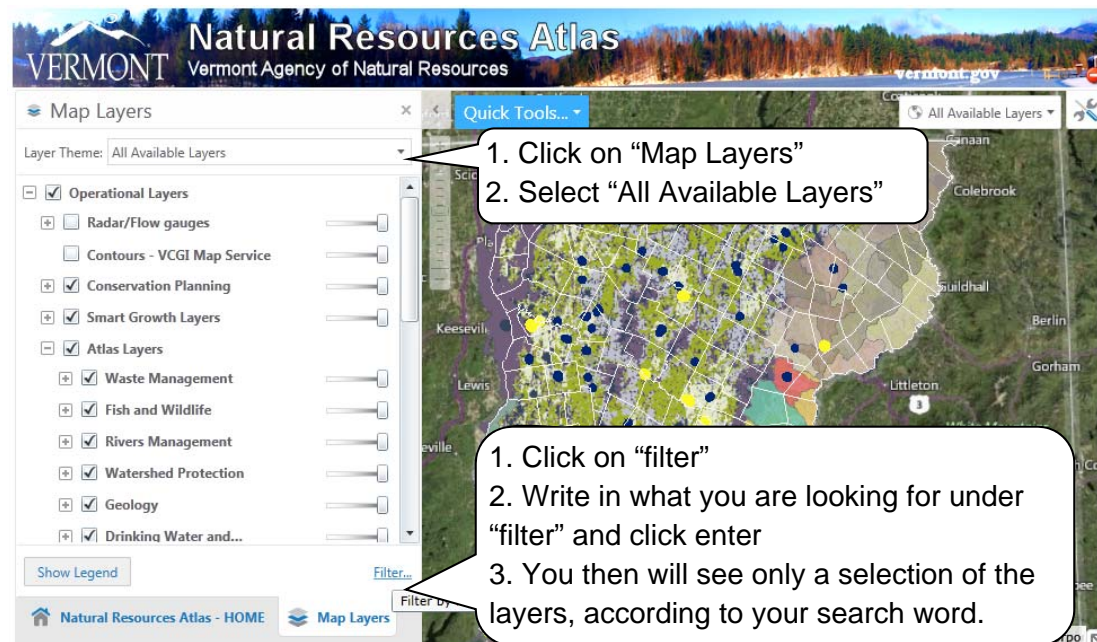

Finding the toolbar:

To see the Google street view, you can right click on a line which is slightly yellow (major roads and some other town roads) and then select "Open Google Street View Here"

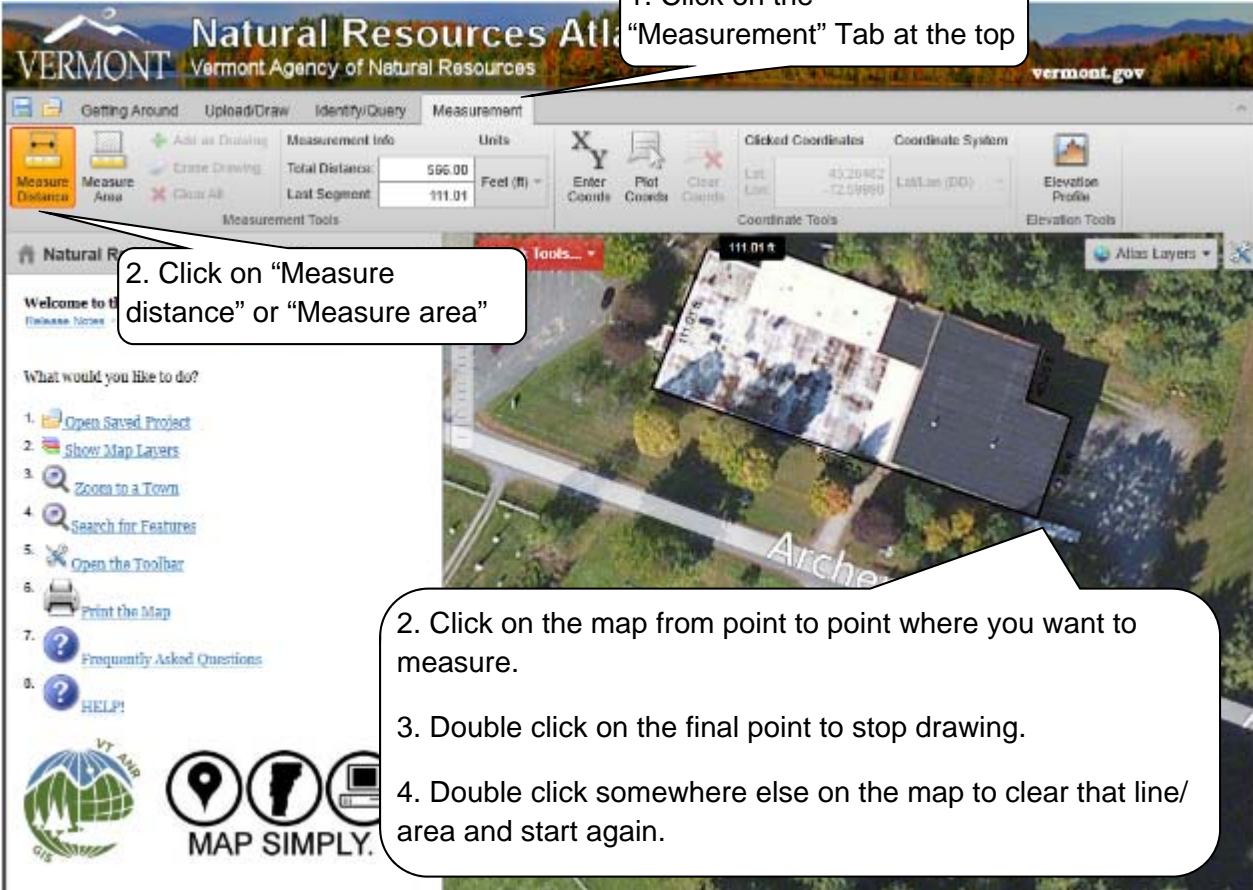

## To find layers

## Distance, Coordinates, and area

To measure a distance or area:

1. Click on the "Measurement" Tab at the top

2. Click on "Measure distance" or "Measure area"

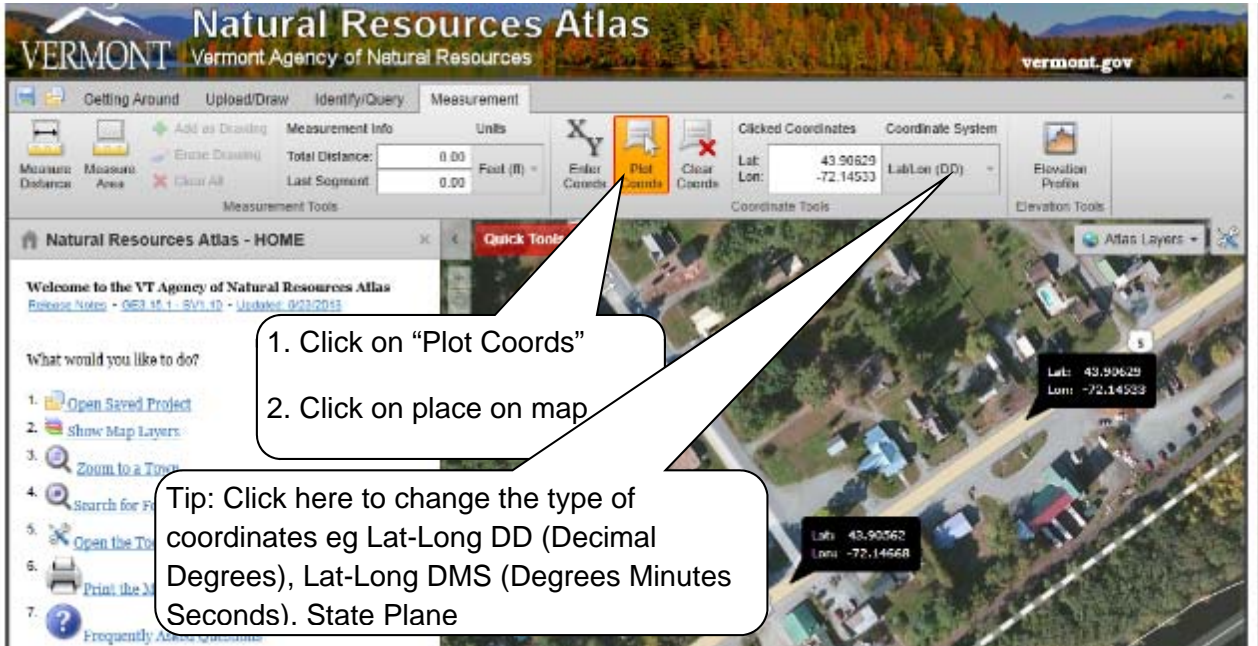

2. Click on the map from point to point where you want to measure.

3. Double click on the final point to stop drawing.

4. Double click somewhere else on the map to clear that line/area and start again.

The screenshot shows the Vermont Natural Resources Atlas interface. The top navigation bar includes "Getting Around", "Upload/Draw", "Identify/Query", and "Measurement". The "Measurement" tab is active, displaying a toolbar with "Measure Distance" and "Measure Area" buttons. A "Measurement Info" panel shows "Total Distance: 556.00 Feet (ft)" and "Last Segment: 111.01". The map displays an aerial view of a building with a black outline indicating a measured area. The "Coordinate System" panel shows "Lat: 43.20462" and "Lon: -72.59990".

To find out coordinates:

1. Click on "Plot Coords"

2. Click on place on map

Tip: Click here to change the type of coordinates eg Lat-Long DD (Decimal Degrees), Lat-Long DMS (Degrees Minutes Seconds). State Plane

The screenshot shows the Vermont Natural Resources Atlas interface with the "Plot Coords" tool selected in the toolbar. The "Coordinate System" panel shows "Lat: 43.90629" and "Lon: -72.14533". The map displays an aerial view of a residential area with two black callout boxes showing coordinate data: "Lat: 43.90562, Lon: -72.14668" and "Lat: 43.90629, Lon: -72.14533".

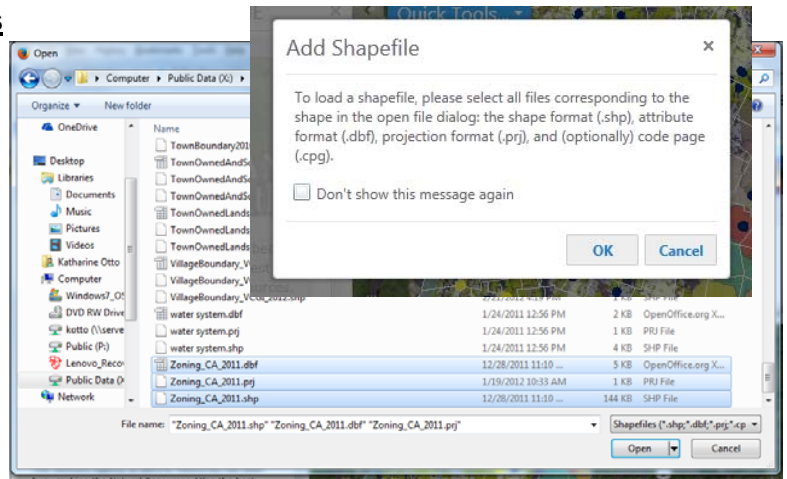

## To Upload a shapefile and change how it looks

To upload a shapefile:

1. Click on “Upload” at the top”, then click “add shapefile”.
2. If you get the advice below, click “ok”.
3. Then select the three relevant files (should all have the same “name”, but then different endings of .dbf, .prj and .shp).

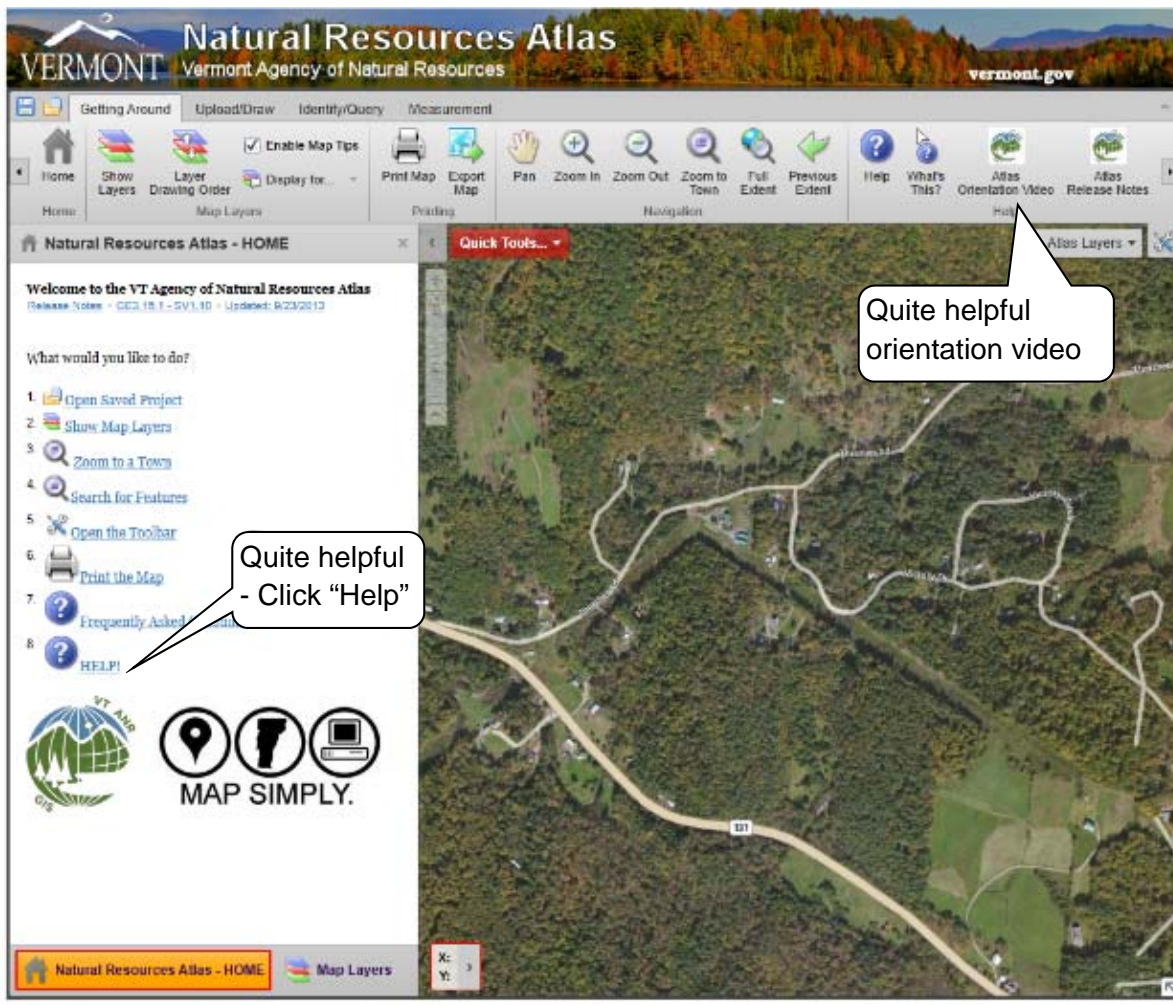

To change how it looks:

1. Right click on the layer. (Hint: it is likely stored under “Graphics Layer” at the bottom of the layer list)
2. Click on “Symbolization”. Then select border and fill colors. Use the sliders to change how transparent the layer is

## For additional help

*Really helpful* - Hour long video which shows you have to navigate and what to do – Produced by ANR in February 2013 [http://www.youtube.com/watch?v=iqDr93vUC\\_8](http://www.youtube.com/watch?v=iqDr93vUC_8)

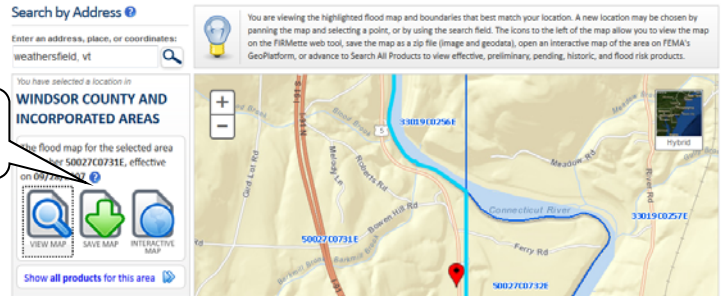

# FEMA maps

## Getting started

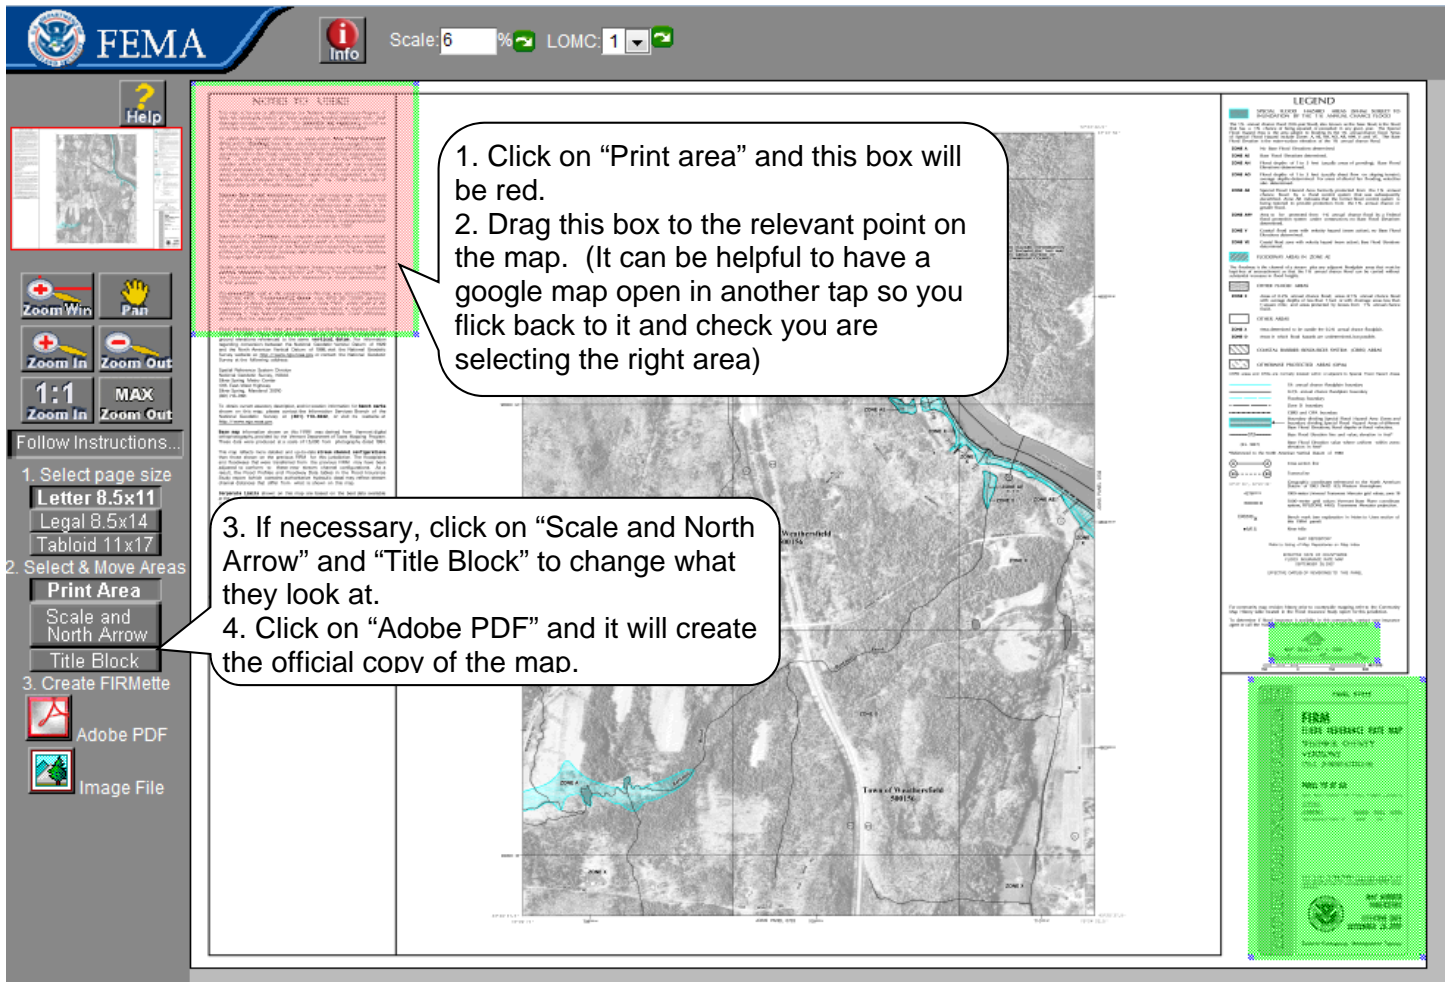

<http://msc.fema.gov/portal>

Click "Save Map" for it to automatically download the entire map square.

## To make an official copy of the map "ie "Firmette")

1. Type in location
2. Click on "View map"
3. Click on "Make a firmette"

To explore the flood hazard areas in closer detail

1. Type in location
2. Click on “Interactive Map”
3. Then explore!

The default base map is from a USGS service and conforms to FEMA's specification for horizontal accuracy. This base map is composed of the orthoimagery used when the Flood Insurance Rate Maps (FIRMs) were initially created combined with standard imagery products managed by USGS. This map should be considered the best online resource to use for official National Flood Insurance Program (NFIP) purposes when determining locations in relation to regulatory flood hazard information. If a different base map is used with the NFHL, the accuracy specification may not be met and the resulting map should be used for general reference only, and not official NFIP purposes.

The screenshot shows the FEMA's National Flood Hazard Layer (Official) web application. The interface includes a top navigation bar with 'HOME', 'MODIFY MAP', and 'Sign In'. Below this is a search bar and a toolbar with 'Details', 'Basemap', 'Share', 'Print', and 'Measure'. A 'Contents' panel on the left lists various layers with checkboxes. The main map area displays flood hazard zones over an aerial base map, with labels for 'FLOODWAY Zone AE' and 'AREA OF MINIMAL FLOOD HAZARD Zone X'. Three callout boxes provide instructions: 1. Click the 'Layers' icon to view the list of layers. 2. Click the checkboxes in the 'Contents' panel to select layers. 3. Click the 'Legend' icon to view the legend for the selected layers.

HOME | FEMA's National Flood Hazard Layer (Official) | MODIFY MAP | Sign In

Details | Basemap | Share | Print | Measure | Find address or place

1. Click this symbol to find a list of the potential "layers" you can show

Contents

- NFHL (click to expand)
- NFHL Availability
- LOMRs
- LOMAs
- FIRM Panels
- Base Index
- PLSS
- Topological Low Confidence Areas
- River Mile Markers
- Datum Conversion Points
- Coastal Gages
- Gages
- Nodes
- High Water Marks
- Station Start Points
- Cross-Sections
- Coastal Transects
- Base Flood Elevations
- Profile Baselines
- Transect Baselines
- Limit of Moderate Wave Action
- Water Lines

2. Click on the check-boxes to select which layers to show.

3. Click this symbol to show the "legend" of what data has been selected
